Web Developer | Web Designer | Frontend Engineer |

After leaving college soon after finishing High School for good, I began to design cms based websites for small businesses. Three years later, I'm a Full Stack Web Developer. While trying to get to this stage, I taught coding and robotics at a school district, started my own program where I teach youth the basics of programming, attended a Web Development online Boot-Camp, used my web design skills and eye for design to freelance in my spare time, and most recently, I was part of a Front End Developer team that built the first Health-tech application in the country of Somalia aimed at organizing the country's healthcare industry.

With this in mind, I am prepared to take on what's next on my journey.

CORE COMPETENCIES

- Developing RESTful API Consuming Web Applications
- Designing Responsive User Interfaces and websites
- State Management throughout a Web Application
- Implementation of good UX/UI flow when designing and building Frontend Web Applications
- Evaluating The Most Effective Technologies to Use for Each Web Development Projects
- Following Emerging Trends in Web Development
